史前洞穴岩画中的奶蛙形象及其与早期人类的共存证据研究

Study on the Coexistence of Naiwa and Early Humans Shown in Prehistoric Cave Paintings

摘要 Abstract

2024 年，研究团队在某地发现一处距今约 3.2 万年的史前洞穴遗址，其中多幅岩画出现了与现代奶蛙形象高度相似的直立生物，并与人类、其他动物共同活动。通过图像分析、层位测年和遗址样本比对，确认该形象并非已知动物的变形描绘，而是一种独立的史前生物形象，可能曾与早期人类在同一地理环境中长期共存。

In 2024, a prehistoric cave site dated to approximately 32,000 years ago was discovered, containing multiple rock paintings depicting a bipedal creature highly similar to the modern Naiwa, appearing alongside early humans and other animals. Through image analysis, stratigraphic dating, and comparative sampling, we confirm that this figure is not a variant of any known animal, but likely a distinct prehistoric species that may have coexisted with early humans in the same environment.
